COMPANY VERIFICATION & TRUST OPERATIONS

Enterprise Business, Functional, UI/UX, Data, API, Security and Testing Specification

Version 3.1 | Team ALPHA | Controlled Product Specification

Document Control and Version History

Field	Value
Document ID	NH-SB-V05
Title	Company Verification & Trust Operations Specification
Version	3.1
Status	Approved Second Brain Amendment
Applies to	Core Release v1.0
Owner	Product Owner / Solution Architect / Trust Operations Lead
Primary users	Employer, Administrator, Candidate/Public Trust Projection
Related modules	M05 Company Trust, M06 Vacancy Lifecycle, M13 Notifications, M15 Reporting and Audit, M16 Administration

Version	Change
3.1	Introduced complete verification UX, API/data/security contract, test catalogue and enhanced prototype.

Table of Contents

1. 1. Executive Summary
2. 2. Business Context and Objectives
3. 3. Scope and Product Boundaries
4. 4. Stakeholders and Responsibilities
5. 5. Verification Lifecycle and State Model
6. 6. Complete Employer User Journey
7. 7. Complete Administrator User Journey
8. 8. Screen-by-Screen UI/UX Specification
9. 9. Navigation and Interaction Architecture
10. 10. Business Rules and Validation
11. 11. Notifications and SLA Communication
12. 12. Data Model and Relationships
13. 13. API Contract
14. 14. Security and Privacy
15. 15. Error Handling, Logging and Audit
16. 16. Reporting and Analytics
17. 17. Accessibility and Responsive Design
18. 18. Test Strategy and Acceptance Cases
19. 19. Risks and Controls
20. 20. Implementation Guidance
21. 21. Traceability and Definition of Done

22. 22. Appendices

1. Executive Summary

Company Verification is the trust gate that prevents unverified employers from publishing public vacancies. The workflow validates the legal identity of the organization, confirms that the submitting user is authorized to represent it, protects evidence documents, records an auditable administrator decision, communicates remediation requirements, and projects a reliable Trust Verified state to candidates. Verification never modifies matching scores and is not a paid ranking mechanism.

Canonical publishing rule

An employer may create and maintain Draft vacancies before verification. Public Publish/Activate commands are rejected until the authoritative Company Verification state is Verified. If verification later expires or is suspended, active publishing privileges are removed according to the approved vacancy policy.

2. Business Context and Objectives

Business problem	Enterprise response
Fake or unverifiable employers can publish misleading jobs.	Require business identity and evidence review before public publishing.
Candidates cannot understand why a company is labelled verified.	Expose a clear Trust Verified badge and explain its meaning without exposing private evidence.
Employers do not know what evidence is missing.	Provide a progress-led workspace with per-document status and correction guidance.
Admin decisions can become inconsistent or unaudited.	Use standardized decisions, mandatory reasons, history, risk cues and audit events.
Verification documents contain sensitive data.	Use private storage, resource authorization, malware scanning, retention rules and audited access.

- Reduce fake-company and impersonation risk.
- Create a transparent and recoverable employer onboarding journey.
- Allow administrators to make consistent evidence-based decisions.
- Preserve candidate privacy and matching fairness.
- Produce audit-ready proof for every trust decision.

3. Scope and Product Boundaries

In Scope	Out of Scope / Future
Business identity profile and registration number	Direct government registry auto-approval unless formally integrated
Official domain/email and website evidence	Paid verification or paid score/ranking benefits
Protected document metadata and upload workflow	Public exposure of submitted certificates or representative identity
Admin Approve, Reject, Request More Information	Fully autonomous AI verification decision

In Scope	Out of Scope / Future
Re-submission, suspension and re-verification	Background checks on every employee
Publishing eligibility projection	Guarantee that every vacancy or employment outcome is risk-free

4. Stakeholders and Responsibilities

Stakeholder	Responsibility
Employer Authorized Representative	Provide accurate legal profile, upload evidence, accept declaration, respond to requests and maintain current information.
Trust Operations Administrator	Review identity and evidence, inspect history and risk cues, record a reasoned decision and avoid conflicts of interest.
Candidate / Public User	Consume only the public trust projection and report suspicious vacancies.
Product Owner	Approve policy, evidence categories, SLA and re-verification rules.
Security / Privacy	Approve document access, retention, incident and monitoring controls.
Support	Assist process navigation without making verification decisions.

5. Verification Lifecycle and State Model

Figure 1. End-to-end verification and publishing gate. The state machine separates evidence preparation from active administrative review and from the final trust projection.

State	Meaning	Employer action	Admin action	Publishing
Draft / Unverified	Profile or evidence package incomplete.	Edit and upload.	None.	Draft vacancy only.
Submitted	Submission accepted and immutable snapshot created.	Track status.	Queue triage.	Locked.
UnderReview	Administrator is reviewing evidence.	Read-only tracking.	Inspect, approve, reject or request information.	Locked.

State	Meaning	Employer action	Admin action	Publishing
MoreInformationRequired	Submission is insufficient or unclear.	Replace/add evidence and resubmit.	Await correction.	Locked.
Verified	Current evidence and identity accepted.	Maintain information and create/publish jobs.	Monitor/suspend/reverify if required.	Enabled.
Rejected	Identity/evidence failed policy.	View reason; resubmit only if allowed.	Record reason and resubmission policy.	Locked.
Suspended	Trust privilege temporarily removed.	Resolve issue and reverify.	Investigate and restore/reject.	Disabled.
Expired	Evidence validity or verification period ended.	Submit re-verification.	Review renewal.	Disabled or grace-policy controlled.

6. Complete Employer User Journey

1. Register an Employer account and verify basic email/phone ownership.
2. Complete Company Profile with legal name, registration number, industry, address, official contact and website.
3. Open the Verification Workspace from the dashboard alert or navigation.
4. Review progress and the required evidence checklist.
5. Upload or replace each evidence item; observe upload, scan and review status.
6. Review the consolidated identity and document summary.
7. Accept the authorized-representative declaration.
8. Submit for administrator review; receive a confirmation and SLA expectation.
9. Track Under Review state without editing the submitted snapshot.
10. If More Information Required, read the reason, correct the identified evidence and resubmit.
11. If Rejected, read the explicit reason and resubmission/appeal policy.
12. If Verified, receive the Trust Verified outcome and gain public publishing eligibility.
13. Maintain evidence currency and respond to suspension or re-verification requests.

7. Complete Administrator User Journey

1. Open the Verification Queue and filter by status, age, risk, document completeness and SLA.

2. Claim or open a submission; the system records review access.
3. Review company identity, official domain, registration number and owner relationship.
4. Inspect document metadata and authorized private streams.
5. Compare profile fields with evidence and prior submissions.
6. Review automated risk cues as advisory signals only.
7. Choose Approve, Reject or Request More Information.
8. Enter a mandatory reason for non-approval decisions.
9. Confirm the decision; system applies concurrency and authorization checks.
10. System records immutable history, creates audit events and notifies the employer.
11. If approved, public trust projection and publishing privilege are updated.
12. Monitor expired, suspended and high-risk verified companies for re-verification.

8. Screen-by-Screen UI/UX Specification

Figure 2. Screen map. Employer preparation/tracking and administrator decision screens converge on the authoritative trust state and publishing gate.

ID / Screen	Purpose	Required UI	Primary actions
CV-01 Employer Dashboard Verification Alert	Visible whenever the company is not Verified. Shows current status, one-sentence impact, progress and primary action. It must not use a generic error message.	Status badge; progress; Start/Continue/View Verification button; publishing-lock explanation.	Open Verification Workspace.
CV-02 Verification Overview	Primary workspace and progress dashboard.	Four-step progress, current status, SLA, missing actions, decision summary, support link.	Navigate to identity or documents; submit when eligible.

ID / Screen	Purpose	Required UI	Primary actions
CV-03 Business Identity	Captures fields that must match evidence.	Legal name, registration number, industry, address, official email, phone, website, authorized representative.	Save draft; validation; return to overview.
CV-04 Document Workspace	Manages protected evidence categories.	Document cards/table, file name, upload/scan/review state, upload/replace/remove controls, format/size guidance.	Upload, replace, retry, remove before submission.
CV-05 Review and Declaration	Pre-submission confirmation.	Identity summary, document checklist, warnings, declaration checkbox, Submit button.	Submit immutable review snapshot.
CV-06 Under Review Tracking	Read-only status after submission.	Submitted time, expected SLA, document states, review timeline, withdrawal policy.	Track only; contact support where permitted.
CV-07 More Information Required	Actionable correction experience.	Administrator reason, affected document/field, due date, upload correction, resubmit.	Correct and resubmit.
CV-08 Verification Outcome	Approved or Rejected result.	Outcome, reason, effective date, badge/publishing effect, resubmission or appeal policy.	Post job, correct/resubmit or contact support.
CV-09 Admin Verification Queue	Operational queue.	Company, owner, submitted age, completeness, state, risk, SLA, reviewer, filters.	Open review; assign/claim where implemented.
CV-10 Admin Verification Detail	Evidence-based review workspace.	Identity comparison, protected evidence, risk cues, history, related moderation events.	Approve, Reject, Request More Information.
CV-11 Admin Decision Modal	Prevents accidental or unexplained decisions.	Decision type, reason category, detailed reason, resubmission flag, notification preview, confirmation.	Commit decision with authorization/concurrency.
CV-12 Vacancy Publishing Gate	Explains why public publishing is unavailable.	Verification status, disabled Publish control, direct action to workspace.	Create Draft; complete verification; publish after approval.

9. Navigation and Interaction Architecture

- Employer navigation contains a dedicated Verification item, not only a field inside Company Profile.
- Dashboard warning deep-links to the exact workspace.
- Company Profile edits legal data; Verification Workspace manages trust evidence and submission.
- Admin queue opens a detail workspace before decision controls are available.
- After decisions, users return to the same logical workspace with updated status and notification.
- Browser Back and refresh must preserve the server-authoritative state; unsaved local drafts require explicit warning.

10. Business Rules and Validation

Rule ID	Rule
BR-CV-001	Only Employer-role users may prepare a verification submission for the company they own or are explicitly authorized to represent.
BR-CV-002	Only Administrator/Trust Operations roles may view protected evidence and decide verification.
BR-CV-003	At most one active Submitted/UnderReview review exists per company.
BR-CV-004	Non-approval decisions require a clear reason. Request More Information identifies the affected field/document.
BR-CV-005	Verified state enables public Publish/Activate but does not bypass vacancy moderation, expiry or content validation.
BR-CV-006	Verification does not affect candidate matching score or ranking.
BR-CV-007	A material legal identity change invalidates or reopens verification according to policy.
BR-CV-008	Documents are private and never returned in public/company search projections.
BR-CV-009	Suspended, Expired, Rejected and unverified companies cannot publish public vacancies.
BR-CV-010	Decision, evidence access and state-change events are auditable and immutable.
BR-CV-011	Automated risk indicators are advisory; final approval remains a human accountable decision in Core Release.
BR-CV-012	The Trust Verified badge represents current company verification only; it is not a guarantee of employment or a specific vacancy.

Field / action	Validation
Legal name	Required; normalized length; must match evidence subject.

Field / action	Validation
Registration number	Required; country/jurisdiction format policy; unique where authoritative.
Official email	Valid email; domain consistency check; free-mail domains flagged, not automatically rejected.
Website	HTTPS preferred; normalized and safely rendered.
Address	Required structured address or approved jurisdiction alternative.
Documents	Allowed PDF/JPEG/PNG; server-side MIME/signature validation; configured size/page limits.
Declaration	Required before submission.
Decision reason	Required for Reject and More Information Required.
Concurrency	If-Match/RowVersion required for submission and decision commands.

11. Notifications and SLA Communication

Event	Recipient	Required message
Submission accepted	Employer	Submission ID, date, current state, expected review target.
Review started	Employer	Under Review confirmation without exposing reviewer identity unless policy allows.
More information required	Employer	Reason, affected evidence, correction action and due date if configured.
Verified	Employer	Effective date, Trust Verified meaning and publishing enabled.
Rejected	Employer	Reason, resubmission/appeal policy and support route.
Suspended/Expired	Employer	Effective impact, active vacancy policy and re-verification steps.
New submission	Admin queue	Queue/SLA update; no sensitive content in email or push payload.

12. Data Model and Relationships

Entity	Purpose	Key relationships
Company	Legal/business profile and owner context.	1-to-many verification submissions; 1-to-many vacancies.
CompanyVerificationSubmission	Immutable review snapshot and lifecycle state.	Belongs to Company; has documents, decisions and history.

Entity	Purpose	Key relationships
CompanyVerificationDocument	Private evidence metadata and scan/review status.	Belongs to Submission; references protected object storage.
CompanyVerificationDecision	Approve/Reject/RequestInfo/Suspend decision with reason.	Belongs to Submission; decided by Admin User.
CompanyVerificationHistory	Ordered state and operational event history.	Belongs to Submission/Company.
AuditEvent	Cross-cutting immutable security/business audit.	References actor, company, submission and correlation ID.
Notification	Owner-only communication record.	References employer user and event source.

Data protection

Representative identity documents, registration certificates and address/tax evidence are classified as restricted business/identity data. Public projections include only company name, verification state/effective date as approved, and the Trust Verified badge.

13. API Contract

Method	Path	Authorization	Purpose
GET	/api/v1/employer/company/verification	Employer owner	Current state, progress, required evidence and history projection.
PUT	/api/v1/employer/company/verification/profile	Employer owner	Save legal identity draft using If-Match.
POST	/api/v1/employer/company/verification/documents	Employer owner	Upload evidence to quarantine; returns metadata/status.
DELETE	/api/v1/employer/company/verification/documents/{documentId}	Employer owner	Remove draft evidence before active review.
POST	/api/v1/employer/company/verification/submit	Employer owner	Validate, snapshot and submit; Idempotency-Key and If-Match.
POST	/api/v1/employer/company/verification/resubmit	Employer owner	Submit corrected evidence after RequestInfo/allowed Rejection.
GET	/api/v1/admin/company-verifications	Admin trust role	Paged/filterable queue.
GET	/api/v1/admin/company-verifications/{submissionId}	Admin trust role	Review detail, evidence metadata and history.

Method	Path	Authorization	Purpose
GET	/api/v1/admin/company-verifications/{submissionId}/documents/{documentId}/content	Admin trust role	Audited authorized private stream.
POST	/api/v1/admin/company-verifications/{submissionId}/decision	Admin trust role	Approve, Reject or RequestInfo with reason and If-Match.
POST	/api/v1/admin/companies/{companyId}/suspend-verification	Admin trust role	Suspend trust privilege with reason.
POST	/api/v1/admin/companies/{companyId}/request-reverification	Admin trust role	Open re-verification requirement.

14. Security and Privacy

- Use private object storage with no public URLs.
- Upload to quarantine; validate extension, MIME, magic bytes, size and page/image limits; malware scan before review availability.
- Encrypt data in transit and at rest; store only storage keys and hashes in SQL.
- Resource-authorize every document stream against admin trust role and active review purpose.
- Audit evidence views and downloads with actor, time, submission, document, IP/device context where approved.
- Avoid displaying representative national ID numbers or full sensitive identifiers in list screens.
- Apply retention and deletion policy after review/expiry while preserving legally required decision/audit evidence.
- Protect decision endpoints with anti-replay/idempotency, RowVersion and rate limits.
- Do not expose internal risk scores to public users; explain employer actions without revealing security detection logic.

15. Error Handling, Logging and Audit

Scenario	User experience	Technical outcome
Unsupported file	Inline actionable error with accepted formats.	400/415 Problem Details; no object persisted.
Oversized file	Show limit and retain other completed evidence.	413; security event if abusive.
Malware detected	Reject file and explain that a safe replacement is required.	422/423; quarantine and security audit.
Concurrent submission	Refresh state and prevent duplicate review.	409/412 with current RowVersion.
Unauthorized evidence access	Generic not-found/forbidden experience.	403/404 according to leakage policy; security audit.

Scenario	User experience	Technical outcome
Admin reason missing	Keep modal open and focus reason field.	400 validation response.
Service/storage outage	Preserve draft metadata; retry guidance.	503; correlation ID and structured log.

16. Reporting and Analytics

- Pending queue count and age distribution.
- Median and percentile verification turnaround.
- More-information rate and top reason categories.
- Approval/rejection rate by jurisdiction/industry only where privacy and fairness review permits.
- Expired/suspended verification counts.
- Evidence upload failure and malware rejection trends.
- Publishing attempts blocked by verification state.
- Admin decision quality sampling and override/reopen rate.

Analytics guardrail

Analytics support operations and policy improvement. They must not create hidden employer ranking, discriminatory approval policy or paid trust status.

17. Accessibility and Responsive Design

- WCAG 2.2 AA target.
- Status includes readable text and icon; color is supplemental.
- Stepper is an ordered semantic list with current/completed labels.
- Document controls have programmatic labels, error association and keyboard access.
- Upload progress and result use aria-live without excessive announcements.
- Admin tables become cards or horizontally scroll with preserved header context on small screens.
- Decision modal traps focus, supports Escape/Cancel and returns focus to the triggering control.
- Touch targets meet minimum size and destructive actions require confirmation.

18. Test Strategy and Acceptance Cases

Test ID	Scenario	Expected result
CV-T001	Employer opens verification workspace from dashboard warning.	Correct status, progress and missing actions displayed.
CV-T002	Employer uploads valid required evidence.	Metadata saved; scan/review status visible.
CV-T003	Employer uploads invalid/oversized/malicious file.	Blocked with clear error; no active evidence object.
CV-T004	Employer submits incomplete package.	Submission rejected; exact missing requirements shown.

Test ID	Scenario	Expected result
CV-T005	Employer submits complete package twice.	One active review; duplicate safely rejected/idempotent.
CV-T006	Admin opens queue and review detail.	Only authorized data visible; evidence access audited.
CV-T007	Admin requests more information without reason.	Decision blocked and reason focused.
CV-T008	Employer corrects requested evidence and resubmits.	New review event recorded; status UnderReview.
CV-T009	Admin approves.	Company Verified; employer notified; publish enabled; audit created.
CV-T010	Unverified employer attempts publish.	Command rejected; direct verification guidance shown.
CV-T011	Verified employer publishes valid vacancy.	Publishing proceeds subject to moderation/expiry rules.
CV-T012	Admin suspends verification.	Publishing disabled; employer notified; history/audit retained.
CV-T013	Candidate views vacancy/company.	Trust badge shown; no private evidence exposed.
CV-T014	Unauthorized user guesses document ID.	No data leakage; access denied and security logged.
CV-T015	Keyboard/screen-reader flow.	All steps, upload errors, status and decision controls operable and understandable.

19. Risks and Controls

Risk	Impact	Control
Forged documents	Fake employers gain trust.	Manual review, file integrity, domain/registry checks, audit and re-verification.
Administrator inconsistency	Unfair or unpredictable decisions.	Policy checklist, reason taxonomy, sampling, training and decision audit.
Sensitive document leakage	Privacy/security incident.	Private storage, resource auth, audited streams, least privilege and retention.
Stale verified state	Outdated trust projection.	Expiry, suspension, material-change triggers and periodic review.
Verification used as ranking factor	Fairness/product contradiction.	Explicit separation from RM-1.0 and automated contract tests.
Employer confusion	Abandonment/support load.	Progress, exact missing actions, SLA and correction journey.

20. Implementation Guidance

- Implement as a vertical slice across Domain, Application, Infrastructure, API and Frontend while preserving Clean Architecture dependency direction.
- Use a submission snapshot so admin decisions refer to stable identity/evidence values.
- Represent evidence status separately from submission status.
- Use an outbox for employer notifications and trust-projection updates.
- Project public VerifiedCompanySummary separately from restricted admin detail.
- Do not embed file bytes in the relational database unless an approved architecture decision changes storage policy.
- Prototype upload is metadata simulation only; production code must use protected storage and scanning.

21. Traceability and Definition of Done

Requirement	UI	API/Data	Test
FR-CV-01 Employer prepares evidence	CV-02 to CV-05	Employer verification profile/document APIs	CV-T001 to T005
FR-CV-02 Admin reviews and decides	CV-09 to CV-11	Admin queue/detail/decision APIs	CV-T006 to T009
FR-CV-03 Publishing gate	CV-12	Verified projection + vacancy command policy	CV-T010 to T012
FR-CV-04 Public trust projection	Job/company public UI	Public company summary	CV-T013
NFR-CV-SEC Restricted evidence	CV-04/CV-10	Private storage + resource authorization	CV-T003/CV-T014
NFR-CV-UX Accessible workflow	All screens	Semantic/error contracts	CV-T015

23. All 12 screens/interactions are implemented or explicitly phased with no hidden gap.
24. State names match statuses.json, API responses, UI labels, notifications and tests.
25. Employer cannot publish publicly before Verified.
26. Admin decisions require authorization, reason policy, concurrency and audit.
27. Private evidence never appears in public projections.
28. v3.1 prototype demonstrates the complete navigation and decision journey.
29. Automated and manual acceptance evidence is retained in the release pack.

22. Appendices

Appendix A - Recommended Evidence Categories

Evidence	Core/Conditional	Purpose
Business Registration Certificate	Core	Legal existence and registration identity.

Evidence	Core/Conditional	Purpose
Company Address Proof	Core	Operational/legal address corroboration.
Authorized Representative Identity/Authorization	Core	Authority to act for company.
Tax/VAT Certificate	Conditional by jurisdiction	Tax/business corroboration.
Official Domain/Website	Supporting	Brand/domain trust evidence.
Industry License	Conditional	Regulated-sector authorization.

Appendix B - Decision Reason Categories

- Identity mismatch
- Registration evidence invalid or unreadable
- Address evidence insufficient
- Representative authorization insufficient
- Official domain/contact inconsistency
- Regulated license missing
- Duplicate/suspicious company identity
- Evidence expired
- Other - detailed explanation required
